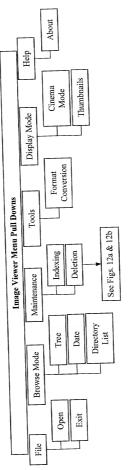

Fig. 11

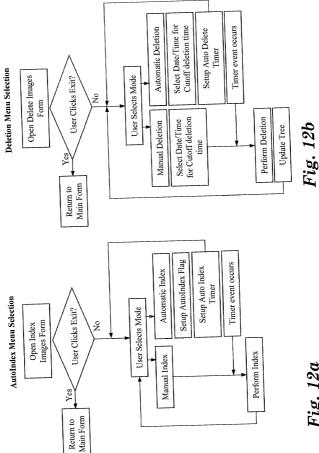

Fig. 12a

OCX initialized at program launch. If more than one camera is viewed, the OCX is loaded as an Array of Objects

The Program sets OpenURL property and optionally saves parameters for recording

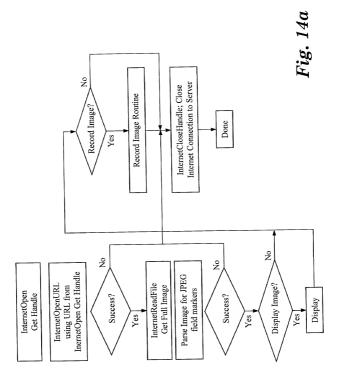

OCX requests image from Server based on URL and CGI parameters in the OpenURL property

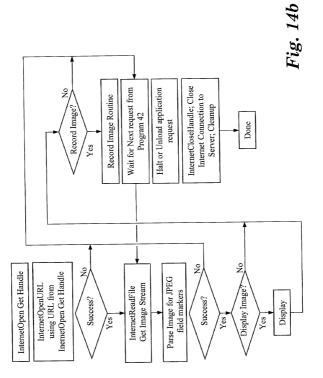

See Figs. 14a-14c

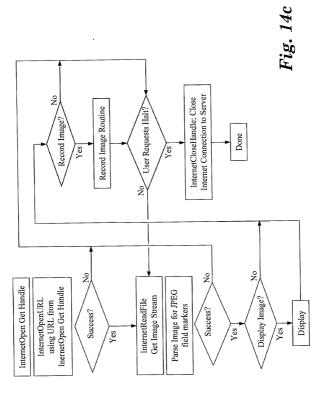

Image received from server.
OCX inserts Current Date
Time Stamp into image header
as comments.

OCX displays image in display window. Intrinsic Image Control used for display. Errors flagged and displayed in display window in yellow text.
